

INSPIRATIONAL DESIGN

by Damixa

damixa

WHEN DESIGN MAKES SENSE

At Damixa we believe in great design that not only appeal to your senses, but also makes sense.

All our products are designed with the needs, wants and challenges of our customers at the core of every product.

This belief has allowed us to create a range of award-winning products that come with user-friendly features that make them smarter, more durable, safer, simpler, eco-friendlier, more flexible, and convenient.

We call it: **When design makes sense**

DANISH DESIGN SINCE 1932

At Damixa we believe that a tap is not just a tap. A tap is an instrument that should make your everyday-life easier, smoother and more beautiful.

That's an attitude, which we inherited through our Danish design tradition. A philosophy, defined by honest and straightforward materials, flawless craftsmanship and a design that suits the ergonomics of the object's intended use.

Today we still design, engineer and assemble all our products in the town of Odense, Denmark.

reddot design award

DANISH DESIGN SINCE 1932

Damixa has 13 times won the Red Dot Design Award, which is one of the most prestigious international design competitions. Expert juries have made awards in the competition for outstanding design achievements which set new standards in the relevant product categories. The Red Dot has become one of the most highly prized and globally recognised seals of quality.

It is a great honour to be among the award-winning products on public display at the Red Dot Design Museum. Damixa has won the Red Dot Design Award for Merkur, Arc, G-Type, Clover, A-Pex, Fern, Slate Pro, Tradition, A-Pex Showersystem, Pine Showersystem and a Honourable Mention for Clover Easy.

TALENTED DESIGNERS PERSONIFY DAMIXA

Damixa is famous all over the world for excellent Danish design. It is our partnerships with talented designers that will make the taps for generations to come.

Damixa works closely with trend-setting designers from all over the world to ensure that it remains at the forefront of tap fittings for the homes of the future.

A-PEX

The future has arrived - more beautiful than ever

A-Pex paves the way for the tap of the future. Designed by top Danish designer, Anders Hermansen - developed on the basis of future studies and focus groups with the participation of users. The result is a ground-breaking range of taps, where form and function interact perfectly.

A-Pex is the winner of several Design Awards and the unique positioning of the handles ensures that no water is spilled onto the worktop by wet hands.

A-Pex is the essence of Damixa's When design makes sense design philosophy and has won five international Design Awards.

How we created A-Pex

Prior to creating A-Pex, we asked ourselves one question: What is it that users want from the tap fixture of the future?

We managed to get designer Anders Hermansen interested in the idea. We invited futurologist Liselotte Lyngsø to a workshop. We designed, developed and tested. And we presented our ideas to "ordinary" people in focus groups.

They responded with their suggestions and we went back to the drawing board. We stayed there until we had created together exactly what we had aimed for: A-Pex.

Meet the designer:
Anders Hermansen

Anders Hermansen is a Danish industrial designer with an innumerable amount of achievements on his CV. He's the man behind a succession of well-known Bang & Olufsen products and has also designed a number of unique furniture items for, among others, the Danish furniture design house of Paustian.

Anders Hermansen is the winner of several Danish and international Design Awards.

ARC

All round innovation and elegance

Arc is a textbook example of Danish design at its best. Innovation when it makes most sense. With its unique 360-degree operation, Arc can be manoeuvred all the way around the kitchen sink. The most flexible and versatile range of kitchen taps on the market is available with multi-coloured handles and spouts and has been awarded with both the Red Dot Design Award and iF Design Award.

How we created Arc

Arc is created from our desire to develop the most flexible Damixa tap fixture ever. As soon as the unique 360 degree movement was in place, the task of completing the innovation was up to designer Jakob Jensen: "The challenge was to let the design show what Arc can do, in order for the user to be able to understand it intuitively. One could say that the functionality contributed greatly in dictating the design. For example, I chose to give the spout a different, more distinctive type of profile. The tap has been turned around to face the opposite side, giving the user a hint that it can be turned to 360 degrees," says Jakob Jensen.

Unique features and awards

360°

reddot design award

Meet the designer: ↑ Jakob Jensen

Jakob Jensen is an in-house design engineer at Damixa and has drawn the lines for several of our most popular tap fixtures. This has always been with respect for the Danish and Nordic design tradition, as well as having a fixed focus on the design supporting the function.

"To me, it's not just about designing something beautiful, whether it be tight and angular or soft and curved. The design must have a meaning and it must be related to the way in which each employee works. In fact, I can't express it any better than we do already with Damixa's design philosophy, When design makes sense," says Jakob Jensen.

Jakob has designed the Damixa ranges of Arc, Bell and Clover Green, and has won several international design prizes together with Damixa.

BELL

Soft and inviting

Chromium and steel can also be inviting, even quite cosy. Just look at Bell with its beautifully curved shapes. A different kind of tap range, where the bottom of the body seemingly floats over the tabletop or washbasin. Stylish and environmentally conscious features have been incorporated into the design.

How we created Bell

What should the tap of the future look like? Which functions will be needed? These were some of the questions we asked - both Danish consumers and ourselves. A design day, concept selection and presentation to a focus group supplied us the answers. We called the design concept cosy chrome and the result was Bell.

Our own designer, Jakob Jensen, says:

"The idea behind Bell was to take something cold and sharp and make it soft and round. Then make it natural and inviting. In addition, Bell was designed using fewer gradients and openings, making it extremely easy to clean."

Kitchen mixer

Basin mixer

Shower system

Damixa's dedication to innovation and functionality has resulted in many convenient and unique features in our taps - many not visible to the eye, as they are an integral part of the product design.

Our icons will guide and help you find the perfect tap to your individual needs.

**ANTI SCALDING**

Limits the movement of the tap head/lever to prevent accidental selection of "full hot" water.

**ECO CLICK**

Designed to save water. You will feel a subtle resistance when opening the tap to avoid operation at full flow. Simply click past the point of resistance for more flow.

**ECO SAVE**

Saves water without compromising comfort. Activated and adjusted in the ceramic cartridge.

**X-CHANGE™**

A unique base that allows you to change the mixer tap in less than 20 seconds without use of special tools.

**COLD START**

Opens for cold water only when the lever is in starting position. Reduces unnecessary consumption of heated water and saves energy.

**PULL OUT**

A flexible hose allowing for easy cleaning of the sink. The shower head can be pulled out up to 40 centimeters. After use, the hose glides back in place by itself.

**RUB CLEAN**

Easy removal of limescale from taps and shower heads without tools or chemicals. Simply rub a finger against the rubber surface to remove the limescale.

**360°**

The spout can be rotated 360 degrees for optimal flexibility and versatility.

**SHOWER SETTINGS**

Indicates number of different settings (1, 2, 3 or 5) on handshowers.

CLOVER GREEN

Green and well thought out

Clover Green is an elegant and efficient tap fixture incorporating stylish, environmentally conscious features. A gorgeous range with tight, simple lines that fit in with the home of today. This range was the winner of the Red Dot Design Award 2011.

How we created Clover Green

Jakob Jensen, a design engineer at Damixa, was the designer of Clover Green. The series originates from a development project that had nothing to do with design, says Jakob Jensen: "It began with the development of a new system for the inside of our tap fixtures. We were looking for a reusable system to avoid reinventing the wheel each time. Clover was the first design we made with the new "innards". Its sharp and defined edged look is still very popular and is an example of Damixa's timeless design." Clover has since been upgraded to Clover Green and includes several stylish and cost-saving features.

CLOVER EASY

User-friendliness for everyone

Clover Easy sets new standards for ergonomics and elegance. Developed for and designed, in close collaboration with the users. This tap fixture is fitted with a handle for people of all ages and sizes, regardless of their physical condition or finger-strength. This is a tap that, despite the well thought out ergonomics, doesn't compromise on design.

How we created Clover Easy

Clover Easy is in the same family as Clover Green and was designed by Damixa's design engineer Jakob Jensen. The aim of Clover Easy was to combine the body from the Clover Green with an extremely user-friendly handle in an elegant design. We therefore teamed up with the Danish design studio, Design Concern, and invited users with special needs to help develop and create the design with us. This resulted in the unique Damixa Easy handle with ergonomic finger-hole. The handle can be operated by using very little effort, e.g. with the fingers, knuckles or elbows. This makes it easier than ever on the fingers to regulate the temperature of the water. If hands could speak, they would ask for a handle design based on the ergonomics of the hand. If eyes could decide, they would choose a beautiful design. If it were up to both the eyes and the hands to decide, they would choose Clover Easy.

OSIER

Classic minimalist design

Modern design meets classical in Osier. A range of elegant taps with a tight, minimalist look. Exactly in line with Danish and Scandinavian design tradition. With its chrome or steel surface, Osier stands out from the crowd and is available with a classic, curved spout or a modern L-shaped spout. All Osier kitchen taps are available with pull-out spouts.

How we created Osier

The designer of Osier is Claus Rosager Nielsen. He is both designer and vice president of research & development at Damixa. "The idea of giving Osier both a curved and L-shaped spout was to combine classical with modern design. In general, Osier follows the plain and simple lines to create a tight and minimalist feel. But with the option of the classic curved spout, a slightly different feel is achieved on the whole. So it's up to the customer to choose," says Claus Rosager Nielsen.

Unique features

Anti scalding, Eco save, Rub clean, Cold start, Pull out and X-Change

CONCEALED

Simplified beauty

Simple elegance. That is the very essence of the new range of built-in shower systems and bathroom taps from Damixa - the Design Award winning manufacturer of mixers, taps and shower systems.

With the brand new Concealed products, Damixa takes its timehonored tradition for beautiful Danish design and superb product quality to the next level.

Less is more

What you see on the outside is pure beauty. The rest is concealed and built into the wall.

The Damixa Concealed product range comprises the design series Hilina, Pine, Bell and Eliza for shower systems and Merkur for bathroom sinks.

Unique features

Anti scalding and Rub clean

Concealed box

Concealed cover plate

Single lever mixer

Meet the designer: Lars Lindegaard Østerhaab

The Concealed products are developed and co-designed by Lars Lindegaard Østerhaab, Development and Sourcing Manager at Damixa. He was involved in bringing the iconic Damixa designs A-Pex and Rowan to life, and for the Concealed series, Lars designed the external handles used for all Concealed shower systems.

"When the cartridge or thermostat is built into the wall, more emphasis is put on the design of the external parts. The visual expression changes and becomes more simplistic, more basic. In a sense, the product design comes even more to life."

PINE

A new profile in a class of its own

A tap doesn't always have to be completely round at the edges. Pine stands out from the crowd with its own, unique profile. Angular and sharp meet soft and rounded in Pine, which could well become a new design classic. Stylish and economical features have been incorporated into the design.

How we created Pine

Pine is the result of a design process comprising of a design day, concept selection and focus group with the participation of users. With a meeting of square and arched, this tap fixture range is suitable for a wide range of styles in the kitchen and bathroom. "With Pine we wanted to challenge the idea that a tap has to always be round. We took our inspiration from the Rounded Square trend and transferred it to a different design with a profile that is both angular and rounded at the same time," says Damixa designer Claus Rantzau, the man behind Pine's unique appearance.

Unique features and awards

Anti scalding, Eco save, Rub clean and Cold start

reddot design award

Meet the designer: Claus Rantzau

Claus Rantzau is a design engineer at Damixa and the man behind the Free, Pine and Rowan ranges, as well as the single-handle version of Tradition. He explains that Damixa's design process is based on making everyday life easier and greener for users:

"When designing new Damixa products, our work is often based on a concrete challenge. We receive input from our customers, sales persons and retailers regarding everyday problems such as servicing or cleaning. We try to solve these challenges by designing products that are visually inviting, well thought out, of high quality and have stylish, user-friendly features."

Pine is one of our most comprehensive series that accommodates all wishes for mixers in your kitchen or bathroom.

SILHOUET

Slim. Scandinavian. Attractive

With its pure, inviting design Silhouet fits beautifully in the kitchens and bathrooms of today as well as tomorrow. For the bathroom sink, Silhouet is available in three different heights to ensure you can also use it with a tall, tabletop mounted vessel sink. The stylish Silhouet shower system features a showerhead that due to its ultra slim design appears to hover for an even more sophisticated look. Silhouet is the essence of timeless Scandinavian design and outstanding Damixa quality.

Meet the designers: Halskov & Dalsgaard

Award winning Danish industrial design firm Halskov and Dalsgaard, established in 1990 by Christina Halskov and Hanne Dalsgaard, helped Damixa bring Silhouet to life. The duo's work is deeply rooted in the Danish/Scandinavian design tradition and integrates aesthetic and functional design. Halskov & Dalsgaard has designed products for, among others, Stelton, Holmegaard, IKEA, Coloplast and Sticks'n'Sushi.

The goal with Silhouet for Damixa was to create a simple, modern and appealing series of taps and mixers, Christina Halskov explains:

"The tap, whether for the kitchen or the bathroom sink, is a functional object as well as a design element in modern homes. We wanted to create a series of genuine, no-nonsense taps that are a pleasure to use in everyday life and will last for a very long time, both in terms of design and product quality."

SLATE

Stylish design in a class of its own

A new direction for tap fixture design. With its modern and minimalist expression, the stylish Slate fits in perfectly with the interior arrangement of today. The matt black handle on Slate feels good to touch, and the unique combination of black and chrome puts Slate in a class of its own. Slate is also available with a chrome handle and as a Pro-version with a high, black and flexible spout that brings the concept of the kitchen as a functional working space into life.

Kurs Kurz Design from Germany designed slate for Damixa, and Slate Pro has been awarded the prestigious Red Dot Design Award.

TRADITION

New life in a classic design

Tap fixtures had the same appearance as Tradition for many decades. Right until we took it a step further and expanded the range with a new type of tap: Tradition, with its single-handle operation and modern Damixa technology inside. So you can now choose between the classic and the “modern classic.” Also available in polished brass or polished copper.

The story behind Tradition's upgrade

Claus Rantza, an in-house design engineer at Damixa, designed a single-handle version of Tradition. He explains that the idea arose from the desire to upgrade a classic design that would incorporate the functionality of today:

“This type of tap represents a very well-known design that has been popular for many years. The style draws its inspiration from the romantic French country kitchen. An upgrade to a one-knob variant must therefore be handled with care.”

“We worked extensively on the details, to preserve all the characteristics of the old, classic tap fixture. Modern production methods supplied us with the materials, shapes, porcelain ornamentation, etc. to match the original style, while we have added modern technology and functionality to the interior.”

DAMIXA - ALL AROUND THE WORLD

For many years Damixa have supplied high-quality mixer taps, shower systems and bathroom accessories to projects i various sizes all over the world. Here is a selection of the projects listed per country and few examples highlighted:

GERMANY: EIFELER TOR RESORT

Almost 100 holiday houses were equipped with quality kitchen mixers from Damixa, to ensure that both design and quality matched the rest of the interior.

NORWAY: HOTEL OPUS, BERGEN

The hotel chose the Bell Basin Mixer and the Bell shower system when they renovated all 64 rooms. An easy choice because of quality and design.

DENMARK: KORSKÆRPARKEN IN FREDERICIA

800 apartments were equipped with our popular and award winning design series Clover in both kitchen and bathroom, along with our best sellers Fair Jet shower set and Thermixa Zero thermostat.

CHINA: KEMPINSKI HOTEL, DALIAN

The iconic hotel is equipped with our award winning design series G-Type.

MALAYSIA: ANGGUN RESIDENCES

For several hundreds of luxury apartments, a selection of products within the Slate, Willow and Rowan series were chosen to perfect the high end interior.
